SPLINTS *(Please provide opposing model and a Centric Relation Bite Registration of desired vertical opening)*

Flat Plane Occlusal Splint
❑ Upper ❑ Lower
❑ Canine Ramps
❑ Ant Labial Ramp
❑ Ant Lingual Ramp

Full coverage stabilization splint with opposing arch. Counter model is needed with wax bite.
Preferably to send in with your Denor facebow and Bite Records, ie: CR, MI or Protrusive Bite Record.

Anterior Repositioning Splint
❑ Upper ❑ Lower
❑ Canine Ramps
❑ Ant Labial Ramp
❑ Ant Lingual Ramp

Full coverage upper appliance with anterior ramp designed to "capture" the lower anterior teeth and hold the mandible in a forward/anterior position. Lower appliance consists of posterior coverage indexed with upper lingual cusps connected with lingual band of acrylic. Bite reflecting anterior position required.
Preferably to send in with your Denor facebow and CR Bite Record.

❑ Mora – Gelb Splint
❑ Damon Splint

Lower splint with posterior coverage connected with a heavy metal bar lingual of the lower incisors. It is designed to reposition the mandible to achieve a neuromuscular balance and an optimal condyler- fossae relationship. Counter model is needed with a wax bite reflecting the desired occlusal acrylic thickness.
Preferably to send in with your Denor facebow and CR Bite Record.
